

# Finreon Tail Risk Control<sup>®</sup> (Swiss)

#### Strategy

The Finreon Tail Risk Indicator (TRI) measures the probability of large tail events (crashes) on equity markets systematically and on a daily basis by means of various market factors. Accordingly, the fund's equity quota is set between 0% (high measured risks) and 100% (low measured risks), depending on the prevailing market regime as indicated by the TRI.

The equity share is held via a portfolio which tracks the performance of the SPI 20 TR. The cash portion is invested in a portfolio of money market instruments. The strategy is suitable for investors who intend to participate in the risk-controlled performance of the Swiss equity market while avoiding large drawdowns. Total risk born by the investor is similar to a benchmark consisting of 50% equity and 50% SARON ("Benchmark 50/50").

#### **Current month**

During March, the Finreon Tail Risk Indicator measured green throughout the month and is green (low crash risk) at the end of the month. The Finreon Tail Risk Control $^{\otimes}$  strategy is therefore 100% invested in Swiss equities.

31/03/2025

In the current month the Finreon Tail Risk Control® (Swiss) strategy achieved a return of -1.5% and therefore underperformed the benchmark, which achieved -0.9%.

	Tail Risk Control (Swiss) <sup>1</sup>	Benchmark (50/50)
Return current month	-1.5%	-0.9%
Return year-to-date	10.2%	5.0%

- Tail Risk Indicator: The probability of severe tail events (crashes) is measured by means of various market factors on a daily basis and is illustrated by a risk signal light
- Risk signal: The Finreon Tail Risk Control® strategy differentiates between five risk regimes and accordingly controls the equity quota: Ranging from green (low probability of tail events = 100% equities) to red (high probability of tail events = 0% equities)
- Efficient implementation: Risk-controlled equity exposure of 0-100% in a portfolio of SPI 20 single stocks (passive) resp. in money market instruments
- Benchmark: The benchmark is 50% SPI 20 TR Index / 50% CHF SARON the strategy has an average equity exposure of 50% and therefore a long-term volatility which corresponds to a 50% equity investment ("Benchmark 50/50"
- Drawdowns: Larger drawdowns should be avoided. Risk regimes can mostly be recognized

#### **Development of the Finreon Tail Risk Indicator**

The Finreon Tail Risk Control<sup>®</sup> strategy recognizes risk regimes on a consistent basis. During both the burst of the internet bubble in 2001 and the financial crisis the Finreon Tail Risk Indicator indicated a high tail risk. An investment according to the Finreon Tail Risk Control<sup>®</sup> strategy experienced substantially less severe drawdowns.

•Finreon Tail Risk Control® 0-100 (CHF) Fund Class-D live since 12/2013

#### Investment opportunities
